

# Everything Built — March 19-22, 2026

## Day 1 (Mar 19) — Foundation + Deep Research

### Client Intelligence

- **25 clients discovered and built** — found 6 new clients (1636, Franklins, JWS, Vendry, SLP, MDhair) that weren't tracked. Full 6-category intel files for all 25.
- **19 existing client files enriched** — pulled from Slack, Notion, Day.ai, updated all to "(Updated March 2026)"
- **5 deep enrichments** — TPG, Stocks News, Creator Spotlight, EH, Points Path. 7-section deep dives.
- **Claude Chat project instructions for all 18 clients** — custom /friday , /bi-weekly , /recap , /concept skills per client

### QA System

- **QA Log V1, V2, V3** — 135+ issues across all clients. Scanned Creative DB, Concept DB, Designer Briefs, Slack. Found designer patterns, time cost data, 9 wins.
- **QA Log V4** — first Drive-to-Notion cross-reference. 47 issues across 5 clients. Found TPG has 4 different subscriber counts, 78% of clients have zero scripts in Drive.
- **Communication training exercise** — scanned external Slack, matched Jay's messages to proactive communication framework

### API Integrations

- **Google Drive MCP connected** — Drive API + Sheets API enabled. Can read creative folders and spreadsheets.
- **Frame.io API explored** — Developer token, OAuth app, OAuth flow completed. Blocked: TFM workspace is V4 (Adobe-managed), V2 API can't access.
- **GHL (EH) automation designed** — 4-sheet consolidation architecture. Token received but missing scopes.

### Research (overnight agents)

- research/meta-ads-media-buying-2026.md — full 2026 Meta strategy guide
- research/claude-code-power-user-guide.md — advanced Claude Code techniques
- research/meta-creative-frameworks-2026.md — creative frameworks for newsletter ads

- `research/obsidian-superbrain-research.md` — Obsidian MCP, Smart Connections, NotebookLM
  - TPG creative turnoff analysis, StocksNews TFM vs GrowJoy daily CPT comparison
- 

## Day 2 (Mar 20-21) — Vault Hardening + Automation Architecture

### Deep Enrichment Completion

- **20 more deep enrichments** — all 25 clients now have 7-section deep-enrichment.md files
- **6 more Claude Chat projects** — 1636, Franklins, JWS, Vendry, SLP, MDhair. All 25 done.
- **YAML frontmatter added to all 25 client files** — enables Dataview/Bases database views

### GitHub + Obsidian Infrastructure

- **GitHub repo fully operational** — PAT stored in keychain, push working, all work committed
- **CI/CD**: PR template, markdown lint workflow, client frontmatter validation workflow
- **Obsidian plugins**: Dataview, Templater, QuickAdd, Tasks, Advanced Tables, Calendar, Periodic Notes, Smart Connections, Copilot Plus, Linter, Tag Wrangler, Commander, Kanban
- **Templater templates**: meeting-notes, friday-report, bi-weekly-prep, new-client, creative QA log, client onboarding checklist
- **Dataview dashboards**: client-portfolio, weekly-review
- **Kanban board**: creative pipeline tracker
- **Smart Connections config guide** — embedding model upgrade, reasoning effort, system prompt recommendations

### Team Documentation

- **Designers section** — 10 creatives profiled, creative assignment matrix for all 25 clients
- **Client meeting database** — 13 bi-weekly, 2 monthly, 3 ad-hoc, 7 no visibility
- **GM Friday report scorecard** — 100+ reports audited. Rabii 88% on-time (leader). Only 12% hit noon target.
- **Jay Warner team profile** — role, working style, management approach

### QA Log V5

- **112 issues across 23 clients** — Google Sheets cell-level reads enabled. Critical: Houck \$15M vs \$10M Series A discrepancy, Stocks.News CVR collapsed 80%.

## Vault Audit + Live Data Sync

- **Full 25-client audit** — 5 parallel agents, all scored A/A-
- **Live Slack cross-reference** — 7 CPL discrepancies found and corrected
- **CLIENT-INTELLIGENCE-SUMMARY.md overhauled** — deep enrichment 5 to 25, Claude Chat 19 to 23, all CPLs updated

## YouTube Research + Pipeline

- **Chase H AI** — Claude Code + Obsidian + n8n stack, GSD framework, CLI Anything
- **Simon Scrapes** — self-healing workflows, agent teams, 10 essential n8n community nodes
- **YouTube Transcript Pipeline designed** — 4-node n8n workflow (Slack to Extract to SuperData to GitHub)
- Saved to `memory/external-ai-tooling-knowledge.md`

## n8n MCP + Integrations

- **n8n MCP connected** — full API access to Elestio instance
- **n8n Google Drive OAuth connected**
- **Playwright MCP installed** — browser automation for LP screenshots, UTM verification
- **Beehiiv MCP tested** — UTM tracking confirmed flowing from Meta campaigns
- **Pipeboard permissions fixed** — tool name mismatch resolved

## Skills Roadmap Created

- 10 skills prioritized P0-P3 at `research/skills-automation-roadmap.md`
- `/weekly-enrichment` skill built as first implementation

---

## Day 3 (Mar 21-22) — Skills Build + Testing + Database

### 8 Skills Built (parallel agents)

| Skill                         | What                                |
|-------------------------------|-------------------------------------|
| <code>/portfolio-pulse</code> | Cross-client Pipeboard dashboard    |
| <code>/fatigue-scan</code>    | 14-day ad-level WoW with ROAS layer |
| <code>/action-tracker</code>  | Day.ai meeting action items         |

| Skill              | What                               |
|--------------------|------------------------------------|
| /vault-integrity   | Frontmatter validation + staleness |
| /creative-qa       | NEVER rule hook + AI QA skill      |
| n8n Self-Healer    | 12-node error diagnosis workflow   |
| 7x n8n skills      | czlonkowski/n8n-skills installed   |
| /weekly-enrichment | Already built day 2                |

### 3 Hooks Deployed

- `creative-qa-gate.sh` — blocks NEVER violations (all 25 slugs mapped)
- `slack-audit-trail.sh` — JSONL audit log with thread context
- `validate-frontmatter.sh` — 10 required fields checked on every edit

### SQLite Performance Database

- `system/data/pipeboard.db` — campaign-level for 21 clients, ad-level for 5 priority clients
- Client-specific conversion event overrides
- Dedup protection, pagination protocol, freshness checks
- Vision: unified DB joining Meta + ESP data per UTM source

### Skills QA + Live Testing

- Portfolio pulse tested: found account-level inflation, fixed to campaign-level filtering
- Fatigue scan tested TPG + IHH: found pagination bug + missing vault context, fixed both
- 18 issues found across all skills: all P0/P1/P2 fixes applied
- Added Phase 0 (load context first), pagination protocol, disappeared-ads detection, ROAS source priority

### Quartz Delivra Breakthrough

- Fixed pagination bug (100 to 783 subscribers, 8x)
- Fixed BOM parsing bug
- **Confirmed: 92.6% of TFM subscribers never received a broadcast**
- 84.8% open rates for the 58 who do — best of all agencies
- Verification report ready for Armando

### Vault Data Audit

- 147 checks: 97 pass, 22 fail, 28 warn

- Fixed: JWS GM, Points Path CPL target, 3 stale config CPLs, Houck campaign IDs, Quartz biggest\_risk
- Flagged: 5 TBD campaign IDs, OSC/RNT broken pixels, Status News 3-way CPL mismatch

## Monday Briefing Generated

- Full action items + delegation lists for Kinte, Rabii, Lays, Luiz, Mariely
- Key: TPG concepts to client, Quartz emergency, Franklin's LP, Workweek Fivetran

## Insight Links Mailchimp Diagnosis

- Not an n8n workflow — it's the Claude Chat project writing to a Google Sheet
- Stopped Mar 10 — Mailchimp security update invalidated API key
- Lays doesn't know the sheet exists

## Client Config Updates

- TPG: TFM campaign IDs + 8 scaling rules from Mar 17-19 syncs
- Houck: removed GL campaign, kept only TFM Pitch Deck
- Stocks & Income: lead magnet strategy doc stored from Google Drive

---

## By the Numbers

| Category                           | Count                                                 |
|------------------------------------|-------------------------------------------------------|
| Client intel files created/updated | 25                                                    |
| Deep enrichment files              | 25                                                    |
| Claude Chat project instructions   | 25                                                    |
| Client configs                     | 25                                                    |
| Skills built                       | 8 + weekly-enrichment                                 |
| Hooks deployed                     | 3                                                     |
| QA issues logged (V1-V5)           | 294+                                                  |
| Research documents                 | 22                                                    |
| Pipeboard API calls cached         | 100+                                                  |
| Delivra subscribers recovered      | 683 (from pagination fix)                             |
| n8n workflow designs               | 3 (Friday autopilot, YouTube transcript, self-healer) |

| Category                   | Count                                                               |
|----------------------------|---------------------------------------------------------------------|
| MCP integrations           | 7 (Pipeboard, Slack, Day.ai, Notion, Google Drive, n8n, Playwright) |
| Git commits                | 20+                                                                 |
| Obsidian plugins installed | 12                                                                  |
| Memories saved             | 6                                                                   |

---

## What's Left

| Item                                  | Priority | Blocker                                              |
|---------------------------------------|----------|------------------------------------------------------|
| /friday-autopilot n8n workflow        | P0       | Meta API tokens + Sheet IDs                          |
| Import n8n Self-Healer                | P1       | Anthropic API credential in n8n                      |
| Mailchimp API key regeneration        | P1       | Mailchimp security update                            |
| 5 TBD campaign IDs                    | P1       | Pipeboard pull for 1636, Franklins, JWS, SLP, Vendry |
| OSC/RNT pixel fixes                   | P1       | Meta Events Manager access                           |
| /lp-monitor                           | P2       | None                                                 |
| /competitor-watch                     | P3       | None                                                 |
| /onboard-client                       | P3       | None                                                 |
| ESP integration into SQLite cache     | P2       | Beehiiv first, then Sailthru/custom                  |
| Ad-level backfill remaining 7 clients | P2       | Rate limit caution                                   |
| Delivra follow-up with Armando        | Urgent   | Armando silent since Mar 18                          |
| Frame.io access                       | P3       | Nathan to grant Adobe Developer Console              |
